

# DATA CENTER MONITORING SYSTEM

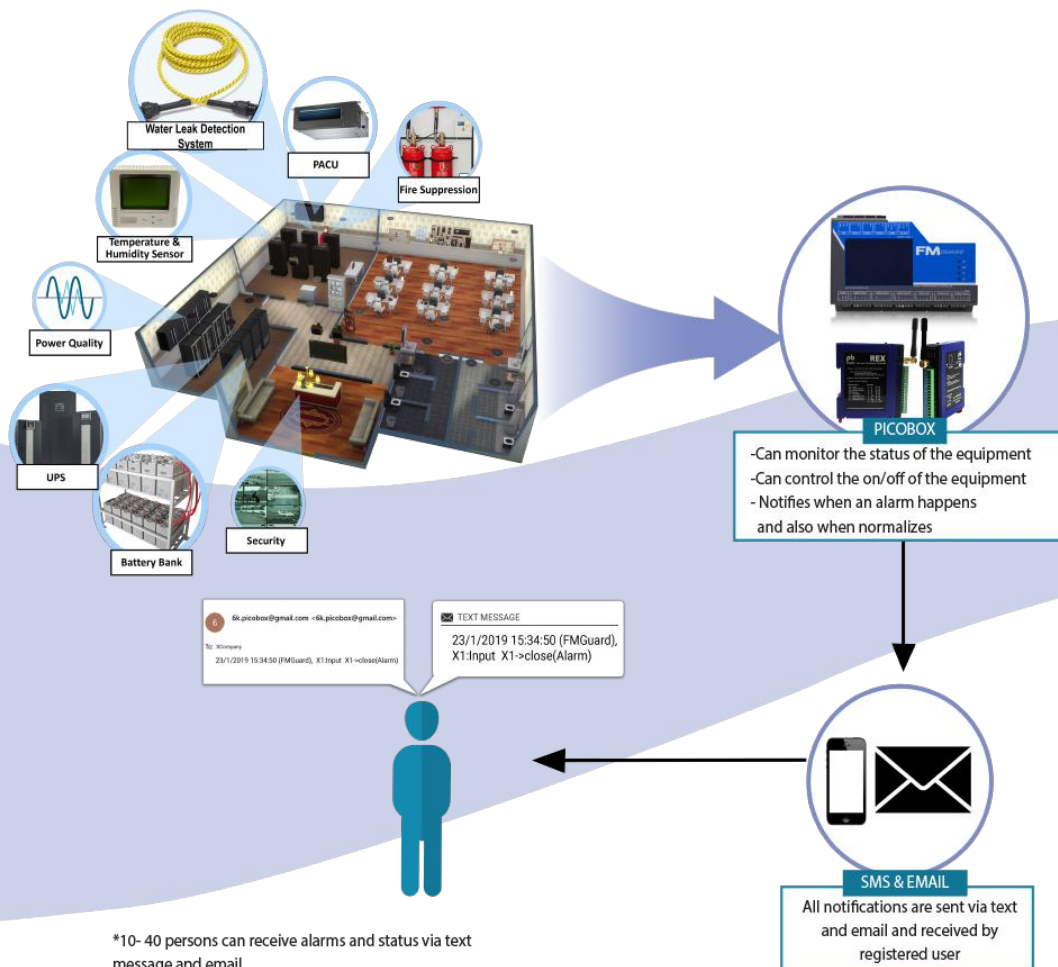

## INTRODUCTION

Data Center stores vital information and data insights of business and its operation. Every equipment is crucial and if not accurately monitored, information and security could be at risk and operation would be greatly affected. This failure might result in loss of valuable clients, financial loss and may even affect the company's reputation. However, this kind of scenario may be prevented with a monitoring system that can monitor your data center 24/7 and capable of sending alarms anytime, anywhere, through SMS and email.

Picobox is the right solution for your data center. It monitors your equipment and instantly notifies you through email and text messages when something goes wrong. Picobox monitoring controllers are designed with many advanced features and at the same time easy to install and use.

## DATA CENTER MONITORING SYSTEM

\*10- 40 persons can receive alarms and status via text message and email  
\*Number of recipient depends on the controller to be used.
